

一种在英国境内 40 年未见的、极度濒危的蜘蛛物种最近被重新发现。人们在一处偏远的自然保护区内发现了这种蜘蛛，该自然保护区只有乘船才能抵达。

The two tiny **arachnids**, measuring just three millimetres long, were found by scientists surveying the Newtown National Nature Reserve using a type of **handheld vacuum** device. It **sucks** up material on the ground and safely **deposits** it inside a container.

这两只小蜘蛛只有三毫米长，科学家在使用手持真空吸入设备调查纽敦国家自然保护区时发现了它们。这种设备能够吸起地面上的物体，然后将其安全地存放在一个容器中。

The scientists searching the **remote** part of the Isle of Wight had almost given up hope of finding the animal, also called the white-knuckled wolf spider. But minutes before they had to board a boat to leave, they found one tiny creature followed by a second. The **species** had last been seen in Britain in 1985. The British Arachnological Society has welcomed the rediscovery of what it called one of the country's **epic** lost species.

在怀特岛上这个偏远地区进行搜寻的科学家曾一度放弃了找到这种动物的希望，这种动物也被称为“白关节狼蛛”。但就在他们需要登船离开的几分钟前，他们接连找到了两只小蜘蛛。该物种最后一次在英国被看到是 1985 年。英国蜘蛛学学会对重新发现该物种表示庆祝，并称其为英国最赫赫有名的失踪物种之一。
