

东格陵兰的海冰持续消融，使得巨型鲸类得以利用这一机遇，进入此前无法涉足的海域。

The sea off the coast of East Greenland used to be covered in ice **year-round**. Now, as it warms and **melts** completely in the summer, the waters have opened up to new visitors – some of the world's largest whales and the fish that they feed on.

东格陵兰沿岸海域过去全年都被海冰覆盖。现在，随着海水变暖，海冰会在夏季完全融化，这片水域也因此迎来新的“访客”，包括世界上一些体型最大的鲸类及其捕食的鱼类。

The scientists combined **aerial** surveys, satellite **tagging** and observations from local **Inuit** communities to track them. And the change has been dramatic.

科学家通过结合航空调查、卫星标签定位以及当地因纽特社区的观测，对这些鲸类展开追踪。而其变化十分显著。

Surveys didn't record a single **humpback** whale **sighting** in the region until 2006. In 2007, seven humpbacks were seen. And, by 2024, there were 150 sightings of the giant whales from ships. Now, **fin** whales, humpbacks and **minke** whales come to East Greenland in their thousands to feed.

直到 2006 年，相关调查才首次在该地区记录到座头鲸的目击报告。2007 年，有七头座头鲸被目击。而到了 2024 年，船只目击这种巨型鲸类的记录已达 150 次。如今，成千上万的长须鲸、座头鲸和小须鲸会汇聚到东格陵兰觅食。

The researchers say this is a huge climate-driven **shift**, with some easily adapting, while other Arctic species, including **belugas**, **narwhals** and **walruses**, all of which need the ice to hide from **predators** or to **breed**, are being **edged out**.

研究人员表示，这是一次由气候变化驱动的巨大转变。一些物种能够轻松适应，而另一些极地物种，包括白鲸、独角鲸和海象，因需要依赖海冰躲避天敌或繁育后代，正逐渐失去生存空间。

词汇表

year-round	全年
melts	融化
aerial	空中的，航空的
tagging	标记追踪
Inuit	因纽特人的
humpback	座头鲸
sighting	发现记录，目击记录
fin	鳍
minke	小须鲸
shift	变化，转变
belugas	白鲸
narwhals	独角鲸
walruses	海象
predators	捕食者
breed	繁殖
edge out	逐渐取代，排挤

听力练习（答案见下页）

一、听第一遍音频，回答问题。

1. Is this article mainly about...
 - a. new food sources for whales.
 - b. new whale migration patterns.

二、用一分钟阅读下列问题，然后听第二遍音频并回答问题。

1. The ocean near East Greenland is covered with ice all year round.
 - a. True
 - b. False
 - c. Not given
2. There is nothing for whales to eat in these new ocean regions.
 - a. True
 - b. False
 - c. Not given
3. As well as technology, scientists spoke to local people.
 - a. True
 - b. False
 - c. Not given
4. Humpback whales were first seen in East Greenland in _____.
 - a. 2006
 - b. 2007
 - c. 2024
5. The opening up of this area of sea has also been positive for belugas, narwhals and walruses.
 - a. True
 - b. False
 - c. Not given

三、听第三遍音频，将句子补充完整。（提示：可以反复听，直到听清楚每一个词）

1. The _____ coast of East Greenland used to be covered in ice year-round.
2. Surveys didn't _____ humpback whale sighting in the region until 2006.

答案

一、听第一遍音频，回答问题。

b. The article mentions food and feeding, but is mainly about new migration patterns, as more areas of sea are opened up by melting ice.

二、用一分钟阅读下列问题，然后听第二遍音频并回答问题。

1. **b. False.** *The sea off the coast of East Greenland **used to be covered in ice year-round**. Now, as **it warms and melts completely in the summer**, the waters have opened up to new visitors - some of the world's largest whales and the fish that they feed on.*
2. **b. False.** *The sea off the coast of East Greenland used to be covered in ice year-round. Now, as it warms and melts completely in the summer, the waters have opened up to new visitors - some of the world's largest whales **and the fish that they feed on**.*
3. **a. True.** *The scientists combined aerial surveys, satellite tagging and **observations from local Inuit communities** to track them.*
4. **a. Surveys didn't record a single humpback whale sighting in the region **until 2006**.**
5. **b. False.** *The researchers say this is a huge climate-driven shift, with some easily adapting, while **other Arctic species, including belugas, narwhals and walruses**, all of which need the ice to hide from predators or to breed, **are being edged out**.*

三、听第三遍音频，将句子补充完整。（提示：可以反复听，直到听清楚每一个词）

1. The **sea off the** coast of East Greenland used to be covered in ice year-round.
1. Surveys didn't **record a single** humpback whale sighting in the region until 2006.
