

词汇: *diet* 饮食

- 1 When you hear the word '**carnivore**', do you think of lions and bears and sharks, or humans? Steak for breakfast, chicken breasts for lunch and salmon and lamb for dinner. No veg and no carbs. This is just a typical day for someone on the carnivore diet. It's a meal plan that only allows meat, **poultry**, eggs, fish, seafood, dairy products and water. It's animal-based opposed to **plant-based**. But why are some people following this diet? And what do nutritionists think about it?
- 2 The carnivore diet is a type of **ketogenic diet**. Normally the body uses **glucose** from carbohydrates as energy, but when there's a lack of this, the liver **breaks** fat **down** into ketones. This essentially means the body can **fuel** itself using fat instead of sugar. Followers of the diet may experience weight loss, especially early on. One reason for this is that protein is highly **satiating**, so you consume fewer calories. On top of this, **cutting out** sugary snacks and fizzy drinks has significant health benefits, and when our carb intake is reduced, our stored water levels fall, again helping to reduce weight.
- 3 Nevertheless, the carnivore diet can't be described as 'balanced' **by any stretch**, according to health experts. In fact, the British Heart Foundation strongly opposes it, saying there is no scientific evidence that it helps weight loss in the long term, and it's lacking in essential nutrients. They say extreme diets which are low in **fibre** and high in fat can increase the risk of heart attacks and strokes. Saturated fat increases levels of **LDL cholesterol** and **processed** meat is high in salt which can raise blood pressure. Fibre, they say, is necessary and **counteracts** all these issues, but it can only be found in 'banned foods' of the carnivore diet – fruits, vegetables, seeds, legumes and wholegrains, for example.
- 4 On social media you'll find plenty of people **showing off** their muscles and claiming their brain is working better than ever after weeks of fat and eggs and butter. Influencer Paul Saladino was an **advocate** of the carnivore diet until he started experiencing some **persistent** unpleasant symptoms. Speaking on a health and fitness podcast, he **recounted** heart palpitations, muscle **cramps** and sleep disturbances. He researched the diet more and concluded it was **detrimental** to his health and probably "not a great thing for most humans".

- 5 Most experts recommend balance, such as the Mediterranean diet, which is full of fruits, vegetables, wholegrains and seeds – it even includes meat, fish and eggs – but everything **in moderation**.

测验与练习

一、根据文章内容选择合适的标题。

1. What could be an alternate title for this article?
 - a. The risks of the carnivore diet
 - b. A new way to lose weight
 - c. Eat more meat

二、根据文章内容选出正确的选项。

1. A person on a plant-based diet eats the opposite of someone on a carnivore diet.
 - a. True
 - b. False
 - c. Not given
2. Where does someone on the carnivore diet get their energy from?
 - a. fat stored in the liver
 - b. ketones which come from fat
 - c. glucose in carbohydrates
3. What does 'it' refer to in the following sentence? *In fact, the British Heart Foundation strongly opposes it...*
 - a. weight loss
 - b. the carnivore diet
 - c. describing the carnivore diet as 'balanced'
4. The British Heart Foundation says the carnivore diet...
 - a. is lacking in fibre.
 - b. helps some people lose weight permanently.
 - c. is higher in salt than other weight loss diets.
5. Paul Saladino thinks the carnivore diet could reduce life expectancy.
 - a. True
 - b. False
 - c. Not given

三、用方框中的单词完成对本文的总结。

Only **1)** _____, dairy and water are on the menu for followers of the **2)** _____ diet. Eating a lot of meat, especially **3)** _____, increases the amount of **4)** _____ you have, which means you're more prone to strokes and heart attacks. It's best to eat everything **5)** _____.

in moderation	LDL cholesterol	plant-based
balanced		carnivore
meat		saturated

（答案见词汇表后）

词汇表

carnivore	食肉动物
poultry	家禽
plant-based	仅有蔬菜的
ketogenic diet	生酮饮食
glucose	葡萄糖
break down	分解
fuel	为...提供能量
satiating	高度饱腹的
cut out	戒除，不食用
by any stretch	无论如何，绝对不
fibre	纤维
LDL cholesterol	低密度脂蛋白胆固醇
processed	经过加工的
counteract	抵消，中和
show off	炫耀
advocate	拥护者，提倡者
persistent	持续的，反复出现的
recount	详细叙述
cramp	抽筋，痉挛
detrimental	有害的，不利的
in moderation	适度地，有节制地

答案

一、根据文章内容选择合适的标题。

a. The risks of the carnivore diet

二、根据文章内容选出正确的选项。

1. **a. True.** *It's a meal plan that only allows meat, poultry, eggs, fish, seafood, dairy products and water. It's animal-based **opposed to plant-based**.*

2. **b.** *Normally the body uses glucose from carbohydrates as energy, but when there's a lack of this, the liver **breaks fat down into ketones**. This essentially means **the body can fuel itself using fat** instead of sugar.*

3. **b.** *Nevertheless, the **carnivore diet** can't be described as 'balanced' by any stretch, according to health experts. In fact, the British Heart Foundation strongly opposes **it**...*

4. **a.** ***Fibre, they say, is necessary** and counteracts all these issues...*

5. **c. Not given.** *He...concluded it was **detrimental** to his **health** and probably "**not a great thing for most humans**". However, he doesn't mention life expectancy.*

三、用方框中的单词完成对本文的总结。

Only **meat**, dairy and water are on the menu for followers of the **carnivore** diet. Eating a lot of meat, especially **saturated**, increases the amount of **LDL cholesterol** you have, which means you're more prone to strokes and heart attacks. It's best to eat everything **in moderation**.
