

词汇: *hot weather and sleep* 高温天气和睡眠

- 1 Around the world, summers are getting hotter. Day and night temperatures are increasing. What impact could that be having on how we sleep?
- 2 Temperature and sleep are closely linked. Typically, our bodies cool themselves down before we sleep. One of the main ways that we do this is by widening **blood vessels** near the skin to allow heat to **dissipate**. In hot weather, this process becomes less effective as it is more difficult for heat to be **transferred**. One of the body's **mechanisms** to speed up this process is by allowing **sweat** to evaporate. However, in **humid** conditions it's harder for **evaporation** to take place. If the body is unable to cool down, then it's more difficult for people to fall asleep and more likely that sleep patterns can be **disrupted**.
- 3 This means that it's important for us to try to manage the temperature of the environment that we sleep in. While it can be costly, air conditioning is a useful tool to keep our sleeping environment cool. Managing **ventilation** is also important. During the hottest hours of the day keeping windows and curtains closed can stop hot air and heat from sunlight entering our homes. At night, once the temperature has dropped, opening windows can allow cool air to come in and reduce the temperature in our homes. **Fans** can help to speed up cooling, as long as air temperatures are low enough. They become less effective in hotter conditions.
- 4 It's not just rooms that we can cool down. Using **breathable bedding** and **sleepwear** makes it easier for our bodies to **regulate** temperature. While it may seem **counter-intuitive**, it can be beneficial to have a warm bath or shower before sleep. Warm water can cause more blood to flow to our skin. Once you get out of the bath or shower, this means that you cool down more quickly. Another tip suggested by sleep experts Kevin Morgan and Lisa Artis is to cool your socks in the fridge and then put them on before going to sleep. They also say that it's important to try to keep to your usual **sleep routine** to avoid disruption to your **sleep habits**.

测验与练习

一、将标题和段落配对。

Paragraph 1 _____

Paragraph 2 _____

Paragraph 3 _____

Paragraph 4 _____

- a. Our body's natural cooling
- b. Climate change
- c. Keeping yourself cool
- d. Keeping bedrooms cool
- e. Increasing heat

二、根据文章内容选出正确的选项。

1. Temperatures are increasing globally.
 - a. True
 - b. False
 - c. Not given
2. What does 'this' refer to in the following sentence? *One of the main ways that we do **this** is by widening blood vessels near the skin to allow heat to dissipate.*
 - a. sleeping in the heat
 - b. cooling our bodies before sleep
 - c. managing the sleep environment
3. What stops sweating being effective?
 - a. late nights
 - b. evaporation
 - c. high humidity
4. What disadvantage of air conditioning is mentioned?
 - a. ventilation
 - b. ineffectiveness
 - c. the price
5. What kind of shower does the article recommend for a hot weather?
 - a. warm
 - b. cold
 - c. icy

三、用方框中的单词完成对本文的总结。

Usually, before we sleep our bodies allow heat to **1)** _____ to cool us down. In hot humid weather this **2)** _____ is less effective making it harder for us to sleep. We can manage the temperature in our sleeping environment by using air conditioning or ensuring that there is sufficient **3)** _____. Using **4)** _____ fabrics for our **5)** _____ can also help us to get a good night's sleep.

disrupt	dissipate	breathable
mechanism		transfer
bedding		ventilation

（答案见词汇表后）

词汇表

blood vessel	血管
dissipate	消散
transfer	转移
mechanism	机制
sweat	汗，汗水
humid	潮湿的
evaporation	蒸发
disrupt	干扰，使...混乱
ventilation	通风，空气流通
fan	风扇
breathable	透气的
bedding	床上用品
sleepwear	睡衣
regulate	调节，调整
counter-intuitive	反直觉的
sleep routine	睡眠规律，作息规律
sleep habit	睡眠习惯

答案

一、将标题和段落配对。

Paragraph 1 **e) Increasing heat**

Paragraph 2 **a) Our body's natural cooling**

Paragraph 3 **d) Keeping bedrooms cool**

Paragraph 4 **c) Keeping yourself cool**

二、根据文章内容选出正确的选项。

1. **a. True. Around the world summers are getting hotter. Day and night temperatures are increasing.**
2. **b. The pronoun 'this' refers to cooling our body down, mentioned in the previous sentence**
3. **c. One of the body's mechanisms to speed up this process is sweating. However, in humid conditions it is harder for evaporation to take place.**
4. **c. While it can be costly, air conditioning is a useful tool to keep our sleeping environment cool.**
5. **a. While it may seem counter-intuitive, it can be beneficial to have a warm bath or shower before sleep.**

三、用方框中的单词完成对本文的总结。

Usually, before we sleep our bodies allow heat to **dissipate** to cool us down. In hot humid weather this **mechanism** is less effective making it harder for us to sleep. We can manage the temperature in our sleeping environment by using air conditioning or ensuring that there is sufficient **ventilation**. Using **breathable** fabrics for our **bedding** can also help us to get a good night's sleep.
