

词汇: **collecting** 收藏

- 1 People collect all sorts of things. I collect **fridge magnets**, so my fridge has slowly become a colourful map of everywhere I've been. I also have **fond** memories of collecting rocks and **shells** from the beach with my mum when we'd visit the coast in summer. It's true that some people collect natural objects such as **fossils** and interesting stones, while others bring home souvenirs from their travels. There are also people collecting **miniature** versions of real commercial products and tiny **replicas** of familiar objects, for example, **scaled-down** retro toys, classic board games and **action figures**. In this way, collectables can be both decorative and functional, giving us something nostalgic to look at or **fiddle** with when bored.
- 2 But why do people have such a strong desire to collect things? One explanation is that collecting gives us a sense of **order** and achievement. *Happiful*, a mental health and wellbeing magazine, wrote that adding to a collection creates a sense of progress and accomplishment. According to an article published in the Journal of Consumer Research, titled Seeking Structure in Collections: Desire for Control Motivates Engagement in Collecting, collecting can help people feel more in control. It explains that collections can become an **extension** of our identity. The things we collect reflect our hobbies, interests and **loyalties**.
- 3 However, not everyone believes collecting is beneficial. **Advocates** of **minimalism** argue that owning fewer possessions improves wellbeing. As Beverley D'Silva reported for the BBC, the **simplicity** associated with a minimalist lifestyle may even contribute to greater happiness. From this perspective, filling our homes with collections can seem more like unnecessarily **hoarding clutter**. There is also an important distinction between thoughtfully **curating** your collection and simply **accumulating** more possessions. The Journal of Consumer Research article warns that some collectors can be drawn into **excessive** spending, especially when companies release new or **rare** additions to collections that were once considered complete. In those cases, collecting may be driven less by passion and more by pressure.

- 4 Despite this, collecting remains as popular as ever. Perhaps the reason collecting **endures** is simple – collections tell stories. And displaying these collections can be just as satisfying as finding them. Happiful describes collections as a kind of self-portrait, reflecting our interests, personality and memories. Whether it's fridge magnets, shells or action figures, the real value often lies not in the objects themselves, but in the memories and meanings attached to them.

### 测验与练习

#### 一、为本文选择总结句。

- a. Collecting can give people a sense of achievement and identity.
- b. Collecting is an expensive hobby that people should try to avoid.
- c. Most people collect souvenirs because they want to remember their childhood.

#### 二、根据文章内容选出正确的选项。
